Portfolio, Programme & Project Management Consultancy

With over 100 years of combined delivery expertise, Avantier provides specialist consultancy across complex programmes and portfolios — helping clients deliver to time, cost and quality, efficiently and effectively.

Our consultants have a demonstrable record of stabilising at-risk programmes and driving them to successful, evidenced outcomes across defence, central government, critical national infrastructure and complex international programmes.

Following a 3-week diagnostic review of a £300M programme — stalled 3 years post-approval due to failing governance and insufficient scope definition — Avantier recovered the programme to a fully evidenced, appropriately governed PTC envelope within 3 months.

Information Management Consultancy

Avantier provides specialist information management consultancy with deep expertise in network and communications architecture.

Avantier led the integration of network, communication and security systems into a government command and control centre, achieving significant improvements in operational efficiency, safety performance and whole-life cost — through rigorous process discipline and intelligent use of technology.

Test & Assurance Consultancy

Avantier delivers rigorous, requirements-driven test management for complex systems, drawing on extensive experience across major defence and government programmes.

Avantier provided end-to-end test management for a comprehensive, estate-wide access control system — authoring the test strategy, co-ordinating all test and trials activities, and delivering independent assurance through meticulous requirements-based testing. The team represented the test function at all key milestones and formal change boards, advocating for quality and efficiency, and developed test documentation templates that set the benchmark for subsequent projects.

Our Services

Avantier Consultancy can be deployed as an embedded resource, independent reviewer or standalone consultancy — structured to meet client procurement and governance requirements. Our core capabilities include:

- **P3M Leadership:** End-to-end portfolio, programme and project management across the full delivery lifecycle.
- **Information Assurance & Regulatory Advisory:** Expert guidance on information assurance frameworks and regulatory compliance.
- **Independent Programme Review:** Objective, evidence-based assessment of programme health, governance and delivery confidence.
- **Test Management:** Expert test management and independent assurance for complex, safety-critical and high-value systems.
- **Requirements Engineering:** Structured requirements definition, management and traceability throughout the programme lifecycle.
- **Change Control:** Disciplined change management to protect scope, cost and schedule baselines.
- **Bespoke Governance Design:** Tailored governance frameworks calibrated to client risk appetite and programme complexity.

Avantier is UK-headquartered with proven in-country delivery capability across the Middle East, Africa, the European continent and the Indian sub-continent.
